### On request

- Other threaded stud lengths
- Other plate sizes

RoHS compliant

· Other plate geometries

## Information

GN 2376 mounting plates with threaded studs are designed as accessories for several hinge variations. They eliminate the need for additional threads, screws, nuts, and washers for mounting. There is no need for the time-consuming pre-assembly of the above components or for counterholding during tightening or loosening.

The mounting plates are mounted from the outside via through-holes in the housing wall or alternatively by welding to the inside of the wall. This results in effective protection against vandalism, and the housing exteriors remain free of attachments that do not match the design or that should be avoided entirely in the interests of easy cleaning.
